Team ID: XXXX

Department of Computer Science & Engineering
Graphic Era (Deemed to be University), Dehradun
Academic Session 2026–27

Team & Mentor Details

Team Information

Team ID: XXXX
Semester: 3rd / 5th
Section: XX
Domain: *XXXX*

Team Members

1. *Student Name – ID*
2. *Student Name – ID*
3. *Student Name – ID*
4. *Student Name – ID*

Mentor

Dr. / Mr. / Ms. Mentor Name **Interactions:** _____

Brief Discussion: Introduce the team, project domain and individual technical responsibilities.

Project Abstract & Problem Statement

Project Abstract

Provide a concise summary of the problem, proposed solution, implementation and final outcome of the project.

Problem Statement

Clearly state the real-world/technical problem addressed by the project.

Target Users / Application

- *Primary users / stakeholders*
- *Application environment*
- *Expected practical benefit*

Brief Discussion: Explain the problem and final solution in a concise manner without repeating the complete

Objectives & Final Deliverables

Finalized Objectives

1. *Objective 1*
2. *Objective 2*
3. *Objective 3*
4. *Objective 4*
5. *Objective 5*

Final Deliverables

- *Working prototype/system*
- *Source code*
- *Database/dataset*
- *Documentation*
- *Other technical outcome*

Brief Discussion: Relate each objective to a tangible final deliverable.

Phase-I & Phase-II Feedback Incorporated

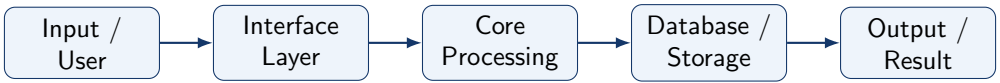

Phase	Feedback / Suggestion	Action Taken
Phase-I	*Feedback received during Phase-I*	*Modification incorporated*
Phase-I	*Feedback received during Phase-I*	*Modification incorporated*
Phase-II	*Feedback received during Phase-II*	*Modification incorporated*
Phase-II	*Feedback received during Phase-II*	*Modification incorporated*

Final Improvement

Briefly explain how the project improved from the initial proposal to the final implementation.

Brief Discussion: Evaluators should be able to clearly identify how earlier feedback has improved the final project.

Final System Architecture

Major Components

- *Component 1*
- *Component 2*
- *Component 3*
- *Component 4*

System Flow

- *Input mechanism*
- *Processing mechanism*
- *Storage mechanism*
- *Output mechanism*

Brief Discussion: Replace the sample diagram with the actual final architecture of the implemented system.

Final Technology Stack

Software / Technologies

- Programming: *XXXX*
- Framework: *XXXX*
- Database: *XXXX*
- Libraries/APIs: *XXXX*
- OS/Platform: *XXXX*

Development Infrastructure

- IDE: *XXXX*
- Version Control: Git/GitHub
- Testing Tools: *XXXX*
- Deployment: *XXXX*
- Other Tools: *XXXX*

Brief Discussion: Justify the final technology choices and mention any changes made from the initially proposed technology stack.

Implementation of PBL Course Concepts

Course	Concepts Actually Implemented	Project Module
Data Structures in C	*Arrays, Lists, Trees, Graphs, Hashing, etc.*	*Module / Feature*
OOPs with C++	*Classes, Inheritance, Polymorphism, STL, etc.*	*Module / Feature*
Operating Systems	*Processes, Threads, IPC, Memory, Synchronization, etc.*	*Module / Feature*
DBMS	*SQL, Transactions, Indexing, Normalization, etc.*	*Module / Feature*

Requirement: Mention only concepts that are **actually implemented** and can be demonstrated/explained during evaluation.

For 3rd Semester: Data Structures + OOPs with C++. For 5th Semester: Operating Systems + DBMS.

Module-Wise Final Implementation

Module	Implementation	Responsible	Status
Module 1	*Major functionality implemented*	*Member*	Completed
Module 2	*Major functionality implemented*	*Member*	Completed
Module 3	*Major functionality implemented*	*Member*	Completed
Module 4	*Major functionality implemented*	*Member*	Completed

Final Project Completion: *XX%*

Brief Discussion: Explain actual implementation rather than planned features. Clearly identify any incomplete functionality.

Working System / Prototype Demonstration

Major Working Features

- *Feature 1*
- *Feature 2*
- *Feature 3*
- *Feature 4*
- *Feature 5*

System Screenshot / Output

Insert screenshot of final working system

Brief Discussion: A live demonstration of the working project should be provided wherever applicable. PPT screenshots should support, not replace, the actual demonstration.

Data / Database / Backend Implementation

Data / Database

- *Database / data source*
- *Schema / data structure*
- *Important tables / entities*
- *Storage / retrieval method*
- *Data validation*

Backend / Core Logic

- *Core processing*
- *API / service*
- *Algorithm / logic*
- *Authentication / security*
- *Error handling*

Brief Discussion: Explain the actual internal working of the system. Use schema, class, sequence, or data-flow diagrams wherever relevant.

Testing & Validation

Test Type	Expected Result	Observed Result	Status
Unit Test	*Expected result*	*Observed result*	Pass
Integration	*Expected result*	*Observed result*	Pass
System Test	*Expected result*	*Observed result*	Pass
Other Test	*Expected result*	*Observed result*	*Status*

Validation Summary

Explain how the final system was tested and validated against the project objectives and requirements.

Brief Discussion: Testing claims should be supported by actual test cases, logs, screenshots, measurements or experimental evidence.

Results & Performance Analysis

Key Results

- *Metric / Result 1*
- *Metric / Result 2*
- *Metric / Result 3*
- *Metric / Result 4*

Graph / Result Evidence

Insert graph / chart / result screenshot

Brief Discussion: Use measurable results wherever applicable. Explain what the results mean rather than only displaying values.

GitHub Repository & Development Evidence

Repository Details

- Repository: *GitHub URL*
- Branch: *main / other*
- README.md: *Updated*
- Contributors: *All members*
- Documentation: *Available*

Development Evidence

- *Regular commits*
- *Meaningful commit messages*
- *Individual commits*
- *Latest source code*
- *Complete commit history*

Requirement: All members must be contributors and individual development activity should be visible through the GitHub history.

Individual Contribution

Member	Role	Final Technical Contribution	Commits
Member 1	*Role*	*Specific technical contribution*	*XX*
Member 2	*Role*	*Specific technical contribution*	*XX*
Member 3	*Role*	*Specific technical contribution*	*XX*
Member 4	*Role*	*Specific technical contribution*	*XX*

Individual Evaluation

Every member must be able to explain, demonstrate and defend their individual technical contribution.

Brief Discussion: Contributions should be specific and verifiable through implementation, GitHub activity and individual viva.

Challenges, Limitations & Lessons Learned

Challenges & Solutions

- *Challenge 1 – Solution*
- *Challenge 2 – Solution*
- *Challenge 3 – Solution*

Current Limitations

- *Limitation 1*
- *Limitation 2*

Technical Learning

- *Learning 1*
- *Learning 2*
- *Learning 3*

Team Learning

- *Collaboration / development learning*
- *Problem-solving experience*

Brief Discussion: Discuss genuine technical limitations and lessons learned rather than presenting the project as having no limitations.

Final Outcomes, Applications & Future Scope

Final Outcomes

- *Outcome 1*
- *Outcome 2*
- *Outcome 3*

Applications

- *Application 1*
- *Application 2*
- *Application 3*

Future Scope

- *Enhancement 1*
- *Enhancement 2*
- *Enhancement 3*

Tangible Project Outcome

Mention whether the project resulted in a working prototype, deployment, dataset, research work, technical solution or other demonstrable outcome.

References & Project Resources

References

1. *Research paper / journal*
2. *Conference paper*
3. *Book / standard*
4. *Official documentation*
5. *Dataset / technical resource*

Project Resources
